

06 March 2019

Innovation in the life sciences and health care industries is occurring at a dizzying pace. Five years ago, anti-PD-1 antibodies from Merck and BMS had yet to be approved, CAR-T therapies were still in small-scale clinical trials, and digital health was seen as electronic step counters and little else. Today, cures are being found for diseases and conditions once considered life threatening or permanently debilitating.

In the newly updated 2019 edition of our [Life Sciences and Health Care Horizons](#) publication, our global team identifies a number of current and evolving trends that are shaping the future of the industry. From regional coverage including Asian, European, Latin American and U.S. markets, to specific legal challenges around intellectual property and changing regulatory environments, to the prospects of future discovery driven by artificial intelligence and big data, our team reports on the extraordinary progress and opportunities in the sector around the world.
